

Architectural Specification

The eFlex Q5 is a four channel system amplifier housed in a 2U lightweight steel chassis that utilises class D amplifier technology to deliver 1250 w per output channel while weighing just 9 kg. The amplifier package also includes full onboard 96 kHz DSP real time monitoring and can be software controlled via network or USB connection. The package offers a level of flexibility than enables Inspired Audio to offer the eFlex Q5 as the only amplifier option for integrated power and management control of single loudspeakers or systems. Internally the channels are grouped in two channel modules which have an independent mains switch and power supply; as a consequence channel pairs can be easily bridged. This function enables the amplifier to be configured as a four channel, three channel, or two channel unit dependent on the loudspeaker system requirements. Each channel pair also shares a common two in, two out DSP allowing flexibility on programming and product preset selection.

The eFlex Q5 benefits from the power density that can be achieved from modern class D switching topology but also combines this with true audiophile performance. A ground up rethink of the topology which has included the use of modern state of the art semiconductors, a short signal path and turning the inherently low level of negative feedback common with switching designs from a disadvantage to an advantage has ensured that sonic issues common on older class D designs have been eradicated. The result is a fast and open sound that is truly sonically transparent. An holistic approach to design has matched the units switch mode power supplies in harmony with the output stages. Potential sources of noise and distortion have been eliminated and a further benefit is the unit's ability to auto-select the mains voltage for global operation.

eFlex Q5

Input impedance:10 k BalancedMaximum input level:+20 dBuInput gain:26.8 dB (32.8 dB bridged)Frequency response:20 Hz - 20 kHz +/- 0.5 dBOutput noise :- 106 dB A weighted (Ref max output, 22 kHz BW)Distortion:<0.05% (1kHz, -3dB output, 22kHz BW)Slew rate:>80 V/usDamping factor:120 (ref 8 ohms)Efficiency:>90% typicalPower supply:Dual, high current, high frequency, switch modeMains frequency:45 - 65 HzMains frequency:Automatic soft-start Automatic brownout recovery Remote shutdown Automatic over voltage protectionTemperature range:0 to +40°CHumidity range:3 off variable speed fans	Technic	al Specification

Humidity range:0 to 80% (non-condensing)Thermal:3 off variable speed fans	Temperature range:	0 to +40°C
Thermal: 3 off variable speed fans	Humidity range:	0 to 80% (non-condensing)
	Thermal:	3 off variable speed fans

Output power (RMS, 20 Hz to 20 kHz, both channels driven)

Per channel:	1250 w into 2 ohms 800 w into 4 ohms 450 w into 8 ohms
Per bridged pair:	2500 w into 4 ohms 1600 w into 8 ohms 900 w into 16 ohms

Software control

The eFlex Q5 uses 'Podware' control software and 'BV Net' network protocol; both tried and trusted industry standard tools that have been developed by Inspired Audio's technology partner Linea Research. Software connection can be via the rear panel USB connection or the RJ45 network socket utilizing a BV Net interface box. Alternative options for system control include an Ethernet bridge which allows WIFI connection and integration with the 'Dante' digital transmission protocol.

Podware will control a single amplifier or a network of up to 32 amplifiers linked under the BV Net protocol. Amplifiers within the network can be grouped together to allow universal parameter changes across selected amplifiers. The output DSP functions are locked to users and determined by factory preset files that cover all EQ, crossover, delay and limiter settings for the product range. On request custom files will also be supplied to cover customers with unforeseen needs or to allow customization within an installation.

Podware also allows a front end user interface that allows overlay adjustments to EQ, gain and delay, to compensate for local conditions or room acoustics. This function can be defeated via a front panel defeat button that restores the factory preset.

Regulatory compliance

This product complies with the EMC & LVD directives as issued by the Commission of the European Community. Compliance with these directives implies conformity with the following European standards:

- EN55103-1 Electromagnetic Interference (Emission)
- EN55103-2 Electromagnetic Susceptibility (Immunity)
- EN60065 Electrical safety

The eFlex Q5 also meets the requirements of FCC part 15B.

Physical	
Height:	88 mm (2U)
Width:	482 mm (Front panel)
Depth:	360 mm (Rear of rack) 35 mm (Forward of rack)
Weight:	9 kg
Indicato	rs and controls
Per channel:	Sig, Limit -6 dB, Limit
Per channel pair:	Power, Protect, Bridge, Network, User DSP active
Controls per channel pair:	User DSP Defeat (can also be disabled with PodWare) Power switch
Monitoring facilities:	Input signal level Output signal level Output current level Temperature Limiter operation Protection system operation Driver impedance
Protection systems	
Output over current:	Initially gain reduced to maintain control, persistent over current causes shutdown
Over temperature:	Limiters applied, persistent over temperature causes shutdown
Mains brownout:	Automatic protection and recovery
Switch on surge:	Soft-start current inrush limiting
DC on output:	Immediate shutdown, power cycle to recovery
Connections	
Mains input:	One off Neutrik 'Powercon'
Audio input:	3 pin female XLR, per CH
Audio Link:	3 pin male XLR, per CH
Output (per channel):	Neutrik NL4 'Speakon'
USB:	Type B (peripheral type)
Network (input & link):	2 off RJ45 sockets
Aux (input & link):	2 off RJ45 sockets
